at least 1 weight percent of an activating compound, said activating compound being a monovalent salt; and wherein the wetting composition contains less than about 10 wt% of organic solvents.

13. (Amended) A wetting composition for use in conjunction with a non-polyvinyl alcohol-containing polymer having water solubility properties that are ionically triggerable, said wetting composition comprising:

about 86 to about 98 weight percent deionized water;
about 1 to about 6 weight percent sodium chloride;
up to about 2 weight percent of one or more preservatives;
up to about 2 weight percent of one or more surfactants;
up to about 1 weight percent of one or more silicone emulsions;
up to about 1 weight percent of one or more emollients;
up to about 0.3 weight percent of one or more fragrances;
up to about 0.5 weight percent of one or more fragrance solubilizers;

and

up to about 0/5 weight percent of one or more pH adjusters.

19. (Amended) A method of making a wetting composition for use in conjunction with a non-polyvinyl alcohol-containing polymer having water solubility properties that are ionically triggerable, said method comprising:

mixing one or more monovalent salts with one or more additives selected from one or more from skin-care additives; odor control agents; detackifying agents;

particulates; antimicrobial agents; preservatives; wetting agents and cleaning agents such as detergents, surfactants, and silicones; emollients; surface feel modifiers; fragrance; fragrance solubilizers; opacifiers; fluorescent whitening agents; UV absorbers; pharmaceuticals; and pH control agents; and wherein the wetting composition contains less than about 4 wt% of organic solvents.
